Name of the Document		Installing VPNCA root Certificate as trusted	
Classification	General	Audience	NIC VPN Users
Version	2.0	Date of last change	7/8/2014

4. Now try to connect VPN again using Cisco AnyConnect Client.

Name of the Document		Installing VPNCA root Certificate as trusted	
Classification	General	Audience	NIC VPN Users
Version	2.0	Date of last change	7/8/2014

5. A warning window will pop up while connecting VPN, as shown below. The server is a trusted one, so you can continue the connection by clicking on **Change Setting...**

6. Once you have clicked on change setting you will get a pop up as shown below. Please click on **Apply Change** button to continue connecting.

7. In case you don't get a pop up shown in step 2, you will get a pop up shown below. Please **UNCHECK** the option **Block connections to untrusted servers**.

Name of the Document		Installing VPNCA root Certificate as trusted	
Classification	General	Audience	NIC VPN Users
Version	2.0	Date of last change	7/8/2014

8. Now try re-connecting either from the web browser and or the AnyConnect client.
9. You will now be prompted for another security warning as shown below. Please **CHECK** the option **Always trust this VPN server and import the certificate** and click **Connect Anyway**.

10. Now you are ready to connect VPN again using Cisco AnyConnect Client.
